Dynamism
The Values That Drive Innovation, Job Satisfaction, and Economic Growth
Edmund S. Phelps • Raicho Bojilov • Hian Teck Hoon • Gylfi Zoega

Nobel Laureate Edmund Phelps has long argued that the high level of innovation in the lead nations of the West was never a result of scientific discoveries plus entrepreneurship, as Schumpeter thought. Rather, modern values—particularly the individualism, vitalism, and self-expression prevailing among the people—fueled the dynamism needed for widespread, indigenous innovation. Yet finding links between nations’ values and their dynamism was a daunting task. Now, in Dynamism, Phelps and a trio of coauthors take it on.

The Great American Housing Bubble
What Went Wrong and How We Can Protect Ourselves in the Future
Adam J. Levitin • Susan M. Wachter

The American housing bubble of the 2000s caused the worst global financial crisis since the Great Depression. In this definitive account, Adam Levitin and Susan Wachter pinpoint its source: the shift in mortgage financing from securitization by Fannie Mae and Freddie Mac to “private-label securitization” by Wall Street banks. This change set off a race to the bottom in mortgage underwriting standards, as banks competed in laxity to gain market share.

John Maynard Keynes’s *General Theory of Employment, Interest, and Money* was the most influential economic idea of the twentieth century. Marglin fills in the theoretical gaps, revealing the deeper meaning of the *General Theory*.

*Why America Leads the World in University Research*

Miguel Urquiola

American education has its share of problems, but it excels in at least one area: university-based research. That’s why American universities have produced more Nobel Prize winners than those of the next twenty-nine countries combined. Economist Miguel Urquiola argues that the principal source of this triumph is a free-market approach to higher education.

Free markets are not the solution for all educational problems. Urquiola explains why they are less successful at the primary and secondary level, areas in which the United States often lags. But the entrepreneurial spirit has certainly been the key to American leadership in the research sector that is so crucial to economic success.
